

wood

volume one

european veneers

The manufacturing of wood veneers takes great skill as well as experience. Similarly, the creation of textures out of such veneers is a very time- and resource-consuming task. The use of a newly developed scanning process made it possible to digitize large veneered panels in high resolution while avoiding the problem of surface reflection. The raw image data was then processed into high-quality textures using our tried and tested texture map creation techniques.

The result is an indispensable collection which is unique in its versatility and quality.

The collection contains large-scale veneer textures of 45 European wood species and processing variations, for each of which there are three textures sets with different area and resolution available. Because of these different scale variations, the textures can be used in a very broad range of applications - from large-scale wall paneling down to furniture close-ups.
